Since 1930. The perfect connection.

Instruction manual mortar hose couplings

LÜDECKE mortar hose couplings guarantee an optimum safety in operation and a maximum capacity of material supply for your machinery.

Attention:

Make sure to use corresponding type sizes and adequate hoses.

Make sure to use the right stem profile for the chosen hose assembly method.

Couplings and plugs have to be tested for damage and abrasion before and during use. If there should be any defects, the fittings mustn't be used anymore.

The assembly of hose and couplings has to be done by experts duly.

It has to be guaranteed before assembling resp. disassembling the couplings that there is no pressure inside the line.

Please always check the complete locking of the coupling handles before use.

To keep the safe and optimum function of the fittings they have to be washed after use.

Technical details:

Max. working pressure
50 bar

Max. working pressure for type size
65 25 bar

Max. working pressure for aluminium
couplings 40 bar

Pumping medium: mortar/floor
screed/concrete

Temperature range of medium:
-0°C - +95°C

Please use only original spare parts
for repair or replacement!

Warning:

The wrong choice or improper use of mortar hose couplings and accessory at high working pressures can lead to serious damage to property and persons.
